

WayOfMono

The Universal AI Coding Agent Harness

One intelligence backend, any agent frontend.

Pre-Seed Pitch Deck

June 2026

The Problem

The AI Developer Tools Market Is Fractured

53% of developers use 2+ AI coding tools (JetBrains, 2026), but there is no standard way to share skills, configurations, and memory across them.

- Each tool has its own config format, skill system, and agent runtime
- Switching tools means rebuilding everything from scratch
- Enterprise teams have zero visibility into tool adoption or effectiveness
- Every developer session starts with a blank slate — no shared context, memory, or best practices

Our Solution

WayOfMono: The Universal Harness

WayOfMono sits above all AI coding tools as a shared intelligence layer. One command installs 81 battle-tested skills, 6 subagents, 11 slash commands, and full configurations across **7 AI coding tools simultaneously**.

- **Single source of truth:** Skills, agents, commands, and configs defined once, deployed everywhere
- **CTO Dashboard:** Real-time visibility into tool adoption, skill health, team velocity
- **Multi-provider LLM:** 30+ LLM providers via unified API — no vendor lock-in
- **Local-first:** Full privacy and offline capability with Ollama
- **Context engineering:** End-to-end workflow from ticket → plan → implementation → validation → commit

Built for the Multi-Tool Reality

Challenge	WayOfMono Solution
Skills duplicated across 7 tools	One canonical source → auto-deploys to all tools
No team visibility into AI usage	CTO Dashboard: skill health, standups, review queue, analytics
Vendor lock-in to one AI tool	Works with all 7 tools + 30+ LLM providers
No context across sessions	f-rr-d context engineering: tickets → plans → validation
Manual setup on every machine	<code>ai-harness --tool=all --yes</code> — 30 seconds, done

Product Architecture

Why Now

The Market Is at an Inflection Point

Trend	Timeline	Impact
Agentic workflows replacing autocomplete	2025-2027	AI tools need sophisticated skill orchestration
53% of developers use 2+ tools	2026	Cross-tool standardization becomes essential
Gartner: IDEs will be optional for 65% of teams	2027	Terminal-based AI tools need harness infrastructure
Enterprise governance becoming primary buying criteria	2026-2027	CTO Dashboard addresses gap no competitor fills
Market consolidating to 3-5 major tools	2026-2028	Harness layer becomes critical for portability

Market Opportunity

Massive and Growing

Metric	Value	Source
TAM (Total Agentic AI Market 2026)	\$40B	Information Matters Q1 2026
Enterprise AI Coding Agent Market	\$10B	Gartner, May 2026
AI Code Tools Market 2026	\$7.9B - \$10.1B	Precedence Research, MarketsandMarkets
Market Growth Rate	26-48% CAGR	Multiple sources
AI Code Tools by 2035	\$91B	Precedence Research
Developer Adoption	85% use AI tools regularly	JetBrains 2025 Survey (24,534 respondents)

WayOfMono's SAM: **\$10B** — Enterprise AI coding agent tools market

WayOfMono's SOM: **\$500M** — AI tool configuration and governance layer

Traction

Built, Shipped, and Working

13 NPM packages published under `@wayofmono` scope — installable today

2 working CLI tools: wocode (coding agent) + wouser (user assistant)

CTO Dashboard: Deployed at cto.wayof.work — tickets, standups, skills, reviews

AI Engineering Harness: 81 skills across 7 tools, 906 SKILL.md files, 3,027 harness files

386+ commits on GitHub, full CI/CD pipeline

3 external integrations: Way of Pi, Way of Work, OptiCat

Metric	Value
Source lines of code	~223,697
NPM packages	13
AI tools supported	7

Business Model

Open Core + Enterprise + Services

Tier	Price	Features
Community	Free	Full harness, 81 skills, 7 tool support, local dashboard
Team	\$19/seat/mo	Cloud dashboard, team management, standups, review queue, skill reporting
Enterprise	\$49/seat/mo	SSO, audit logs, custom integrations, SLA, on-premises, dedicated support

Revenue Streams:

- Enterprise licenses (per-seat subscription)
- Managed cloud dashboard (SaaS)
- Consulting & implementation services

Competition

No One Addresses Cross-Tool Orchestration

Capability	GitHub Copilot	Cursor	Claude Code	WayOfMono
Multi-tool support	✗	✗	✗	✓ 7 tools
Multi-provider LLM	✗	✗	✗	✓ 30+ providers
Team management	✗	✗	✗	✓ CTO Dashboard
Local/offline	✗	✗	✗	✓ Ollama
Skills system	✗	✗	Partial	✓ 81 skills
Context engineering	✗	✗	✗	✓ f-rr-d
Observability	✗	✗	✗	✓ OpenTelemetry
Cross-platform	VS Code only	VS Code fork	Terminal	7 UIs

Our Moat

- **Cross-tool portability:** Only solution that works across all major AI coding tools
- **Enterprise governance:** CTO Dashboard fills a gap no competitor addresses

Team

Name	Role	Background
Josef Lindbom	Founder & CEO	Full-stack AI engineer. Built entire WoM platform: 13 packages, LLM abstraction, TUI framework, harness
Craig Martin	Co-founder	Engineering leader. Infrastructure, deployment, tooling

Extended Team: Tomas (Engineering), Andre (Engineering)

The Ask

\$750,000 Pre-Seed at \$5M Pre-Money Valuation

Use	%	Amount
Engineering (2 full-time hires)	50%	\$375,000
Go-to-Market (marketing, community, content)	25%	\$187,500
Operations & Infrastructure	15%	\$112,500
Legal & Admin (US C-Corp, IP, compliance)	10%	\$75,000

18-month runway to enterprise revenue and Series A metrics

Roadmap

Horizon	Focus
Short-Term (0-12 mo)	Enterprise SSO, multi-workspace, skill marketplace, performance optimization
Medium-Term (12-24 mo)	AI-powered analytics, custom skill builder UI, CI/CD integration, compliance certs
Long-Term (24+ mo)	Enterprise agent marketplace, autonomous orchestration, governance platform

Our Vision

A world where every engineering team has a unified AI infrastructure — regardless of which tools, models, or workflows they choose.

WayOfMono: the operating system for AI-augmented software engineering.
