

WayOfMono — Executive Summary

The Universal AI Coding Agent Harness

Overview

WayOfMono is the ultimate monorepo consolidation for high-performance AI coding agents. It solves the fragmentation in the AI developer tools market by providing a shared Intelligence Backend that serves 7 distinct Agent Frontends. Built on an Interface-Agnostic Philosophy, WayOfMono enables teams to use any AI coding tool with shared skills, configurations, and memory — eliminating vendor lock-in and tool fragmentation.

Tagline: One intelligence backend, any agent frontend.

The Problem

The AI developer tools market has exploded — 7+ major AI coding tools, each with its own configuration, skills, and memory. Key problems:

- **53% of developers use 2+ AI coding tools** (JetBrains 2026 survey) — but none share configs or skills across them
- **Enterprise teams have no visibility** into which AI tools developers are using or how effectively
- **Vendor lock-in:** switching AI coding tools means rebuilding all skills, configs, and workflows
- **No standardized context management** — each session starts from scratch with no memory
- Skills and agent configurations are duplicated across every developer's machine

The Solution

WayOfMono provides a universal AI harness that sits above all AI coding tools:

- **AI Engineering Harness:** Single command installs 81 skills, 6 subagents, 11 slash commands across all 7 tools
- **13 NPM Packages:** Multi-provider LLM abstraction (30+ providers), custom TUI framework, coding agent CLI, user assistant SDK, codebase analysis engine, web intelligence, telemetry, and more
- **CTO Dashboard:** Next.js 16 dashboard with ticket management, standups, skill health, review queue, and ideas board
- **f-rr-d Context Engineering:** End-to-end workflow from ticket creation to implementation to validation to commit
- **Observability-Driven Development:** Built-in OpenTelemetry tracing — design

Market Opportunity

Metric	Value	Source
TAM (Total Agentic AI Market 2026)	\$40B	Information Matters, Q1 2026
Enterprise AI Coding Agent Market	\$10B	Gartner, May 2026
AI Code Tools Market 2026	\$7.9B - \$10.1B	Precedence Research
Market Growth Rate	26-48% CAGR	Multiple sources
AI Code Tools by 2035	\$91B	Precedence Research
Developer AI Tool Adoption	85%	JetBrains 2025 Survey

SAM: \$10B — Enterprise AI coding agent tools

SOM: \$500M — AI tool configuration and governance layer

Traction & Milestones

- **13 NPM packages** published and installable under `@wayofmono` scope
- **2 working CLI tools:** wocode (coding agent) + wouser (user assistant)
- **CTO Dashboard** deployed at cto.wayof.work
- **81 skills** across 7 AI coding tools (906 SKILL.md files)
- **3,027 files** in the AI Engineering Harness
- **386+ commits** on active GitHub repository
- **3 external integrations:** Way of Pi, Way of Work, OptiCat
- **Full CI/CD pipeline** with GitHub Actions and Docker/Podman deployment
- **\$0 revenue** (pre-revenue, pre-seed stage)

Business Model

Tier	Price	Features
Community	Free	Full harness, all skills, local-only dashboard
Team	\$19/seat/mo	Cloud dashboard, team management, standups, skill reporting
Enterprise	\$49/seat/mo	SSO, audit logs, custom integrations, SLA, on-premises

Additional revenue: consulting & implementation services for enterprise deployments.

Competitive Landscape

WayOfMono occupies a unique position in the market:

Competitor	Focus	WoM Advantage
GitHub Copilot	Single-tool autocomplete + agent	WoM works across ALL tools, not just VS Code
Cursor	Best IDE experience (\$2B ARR)	WoM is tool-agnostic, no IDE lock-in
Claude Code	Best agentic workflows	WoM works WITH Claude Code AND other tools
LangChain/CrewAI	Agent frameworks	WoM is a complete end-to-end product, not a library

Key differentiators: Cross-tool portability, enterprise governance dashboard, multi-provider LLM, local-first privacy, context engineering workflow.

Team

Name	Role
Josef Lindbom	Founder & CEO — Full-stack AI engineer, system architect
Craig Martin	Co-founder — Engineering, infrastructure

Extended team: Tomas, Andre

Funding Ask

Amount: \$750,000

Type: Pre-Seed (SAFE or equity)

Valuation: \$5M pre-money

Use of Funds:

- Engineering (50%): Product development, enterprise features
- Go-to-Market (25%): Developer marketing, community, content
- Operations (15%): Cloud infrastructure, CI/CD, tooling
- Legal & Admin (10%): US C-Corp, IP, compliance

Runway: 18 months to enterprise revenue and Series A metrics
