

WayOfMono — Product Roadmap

Current Status (June 2026)

The platform is fully functional with all core components built and deployed:

-  AI Engineering Harness v1.7.6 — 81 skills across 7 tools
-  wocode (Coding Agent) v1.1.0
-  wouser (User Agent SDK) v1.0.4
-  CTO Dashboard v0.6.3
-  13 NPM packages published
-  Docker/Podman deployment infrastructure
-  Full CI/CD pipeline

Short-Term (0-12 Months)

Priority	Feature	Description
P0	Enterprise SSO/SAML	Azure AD, Google Workspace, Okta authentication
P0	Multi-workspace support	Isolated workspaces for different teams/projects
P1	Skill marketplace	Community skill publishing and discovery
P1	Performance optimization	Large monorepo handling, caching, parallel execution
P2	Team analytics dashboard	Usage metrics, adoption trends, cost tracking
P2	API documentation	Full API reference and SDK docs for all 13 packages

Key metric targets:

- 500+ GitHub stars
- 100+ active community members (Discord)
- 10 paid Team tier customers

Medium-Term (12-24 Months)

Priority	Feature	Description
P0	AI-powered analytics	Automated insights from CTO Dashboard telemetry
P0	Custom skill builder UI	Visual skill editor for non-developer admins
P1	CI/CD integration	GitHub Actions, GitLab CI, Jenkins plugins
P1	Compliance certifications	SOC 2 Type II, ISO 27001 readiness
P2	Mobile dashboard	Native mobile app for on-the-go team visibility
P2	Extended API ecosystem	Webhooks, event streams, REST APIs

Key metric targets:

- 5,000+ GitHub stars
- 50 paid Team customers
- 10 Enterprise customers (\$50K+ ACV)

Long-Term (24+ Months)

Feature	Description
Enterprise agent marketplace	Curated, vetted skills and agents from third-party providers
Autonomous engineering orchestration	Multi-agent coordination for complex engineering tasks
Cross-organization skill sharing	Share skills and best practices across org boundaries
AI governance platform	Full lifecycle governance: policy, compliance, audit, cost control
IDE-agnostic editor integration	Direct plugins for VS Code, JetBrains, and web-based IDEs
Global skill registry	Community-driven canonical skill repository

Vision (5+ Years)

WayOfMono becomes the de facto standard for AI-augmented software engineering infrastructure — the operating system that powers how every engineering team builds software with AI.

Key bet: As AI coding tools continue to multiply and evolve, the need for a universal harness layer will become as obvious as the need for version control or CI/CD. WayOfMono is positioned to be that layer.
